

Typical Wall Cross-section

Hanson has a retaining wall system for any purpose, from small garden walls, steps and columns to large retaining walls. Our wall systems offer the ability to build straight or curved walls, vertical or setback, with or without grid, providing flexible solutions to meet the needs of any project.

Wall designs vary based on project requirements and site conditions. The typical cross-section shown below illustrates the various components of a garden or retaining wall design. For more detailed designs, please review "How to Install Walls" or refer to our standard engineering drawings at hansonhardscapes.com. For unique circumstances not covered on our website, please contact your local Hanson Dealer for advice.
